

Atlas — Architecture Diagrams (MVP Scope)

Scope: Phase 0–3 (foundation, auth, knowledge ingestion, RAG chat). Update these as you build — they should reflect what the code actually does, not the aspirational doc.

1. System Overview

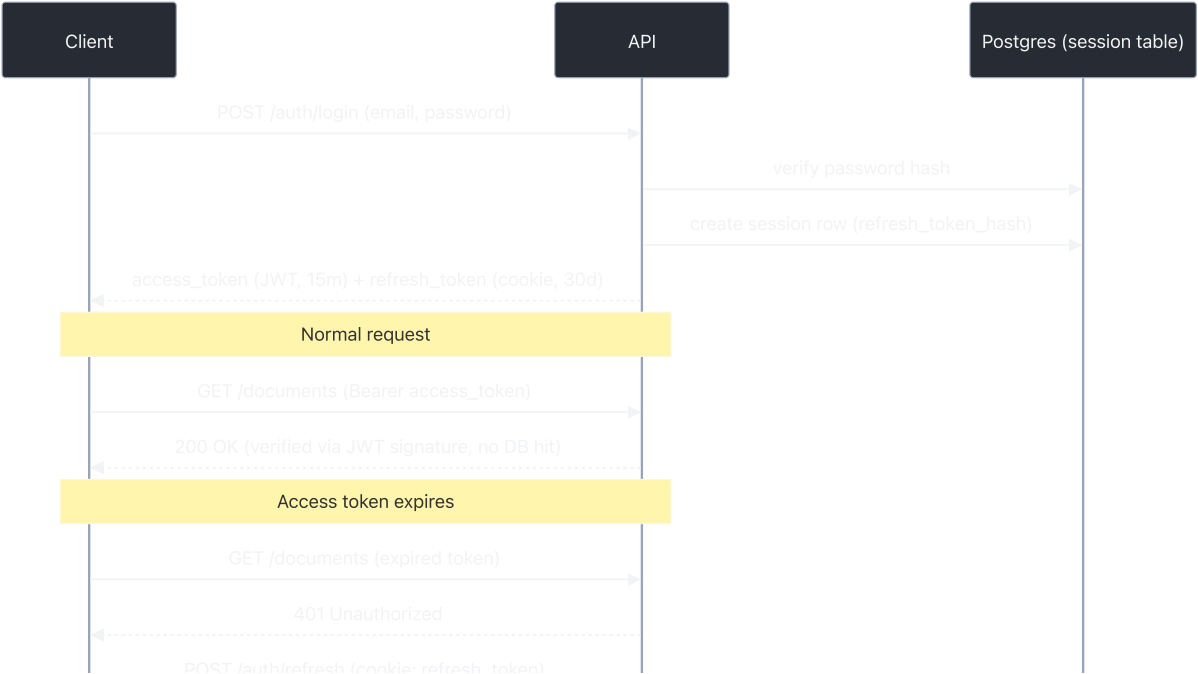

2. Data Model — ER Diagram (MVP tables)

3. Auth Flow — Login, Refresh, Rotation, Reuse Detection

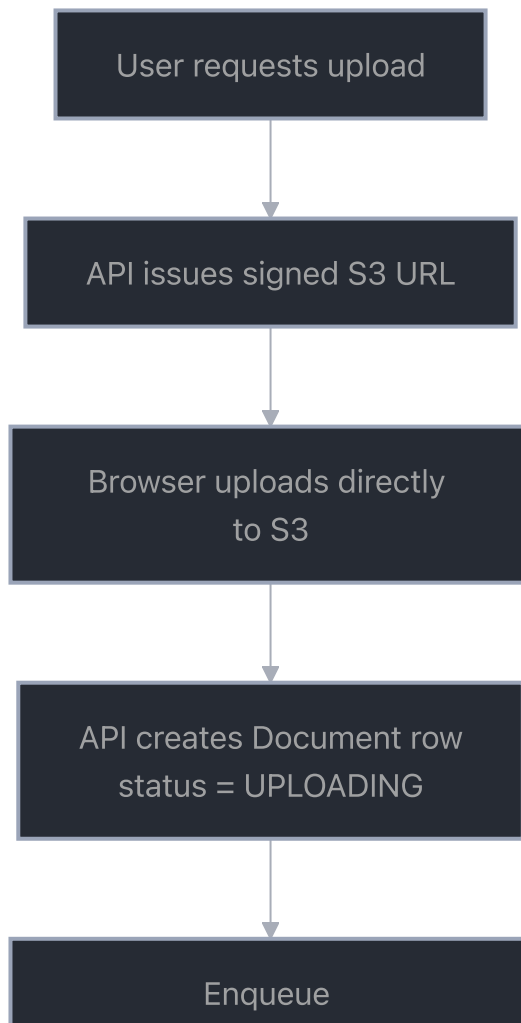

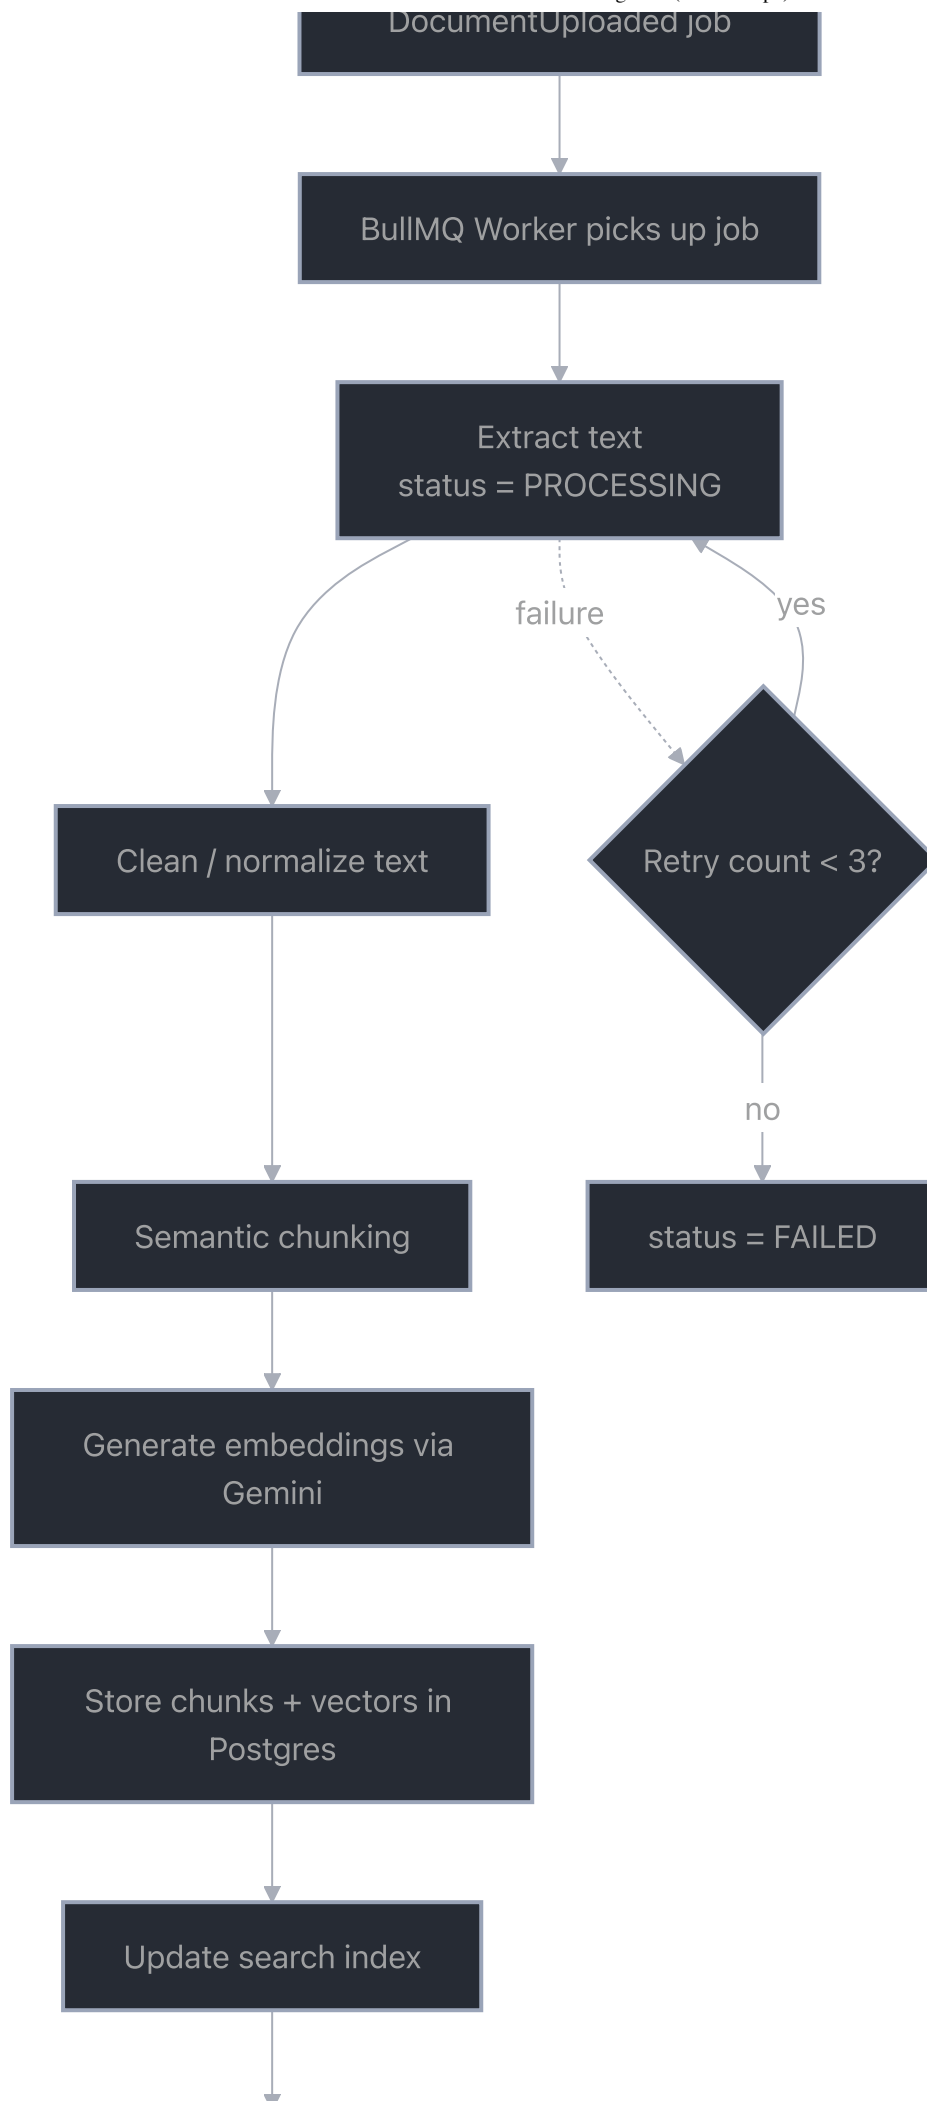

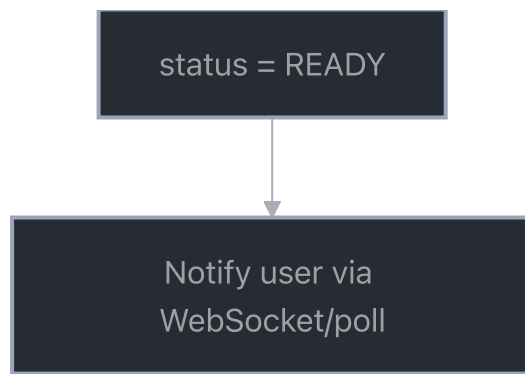

4. Request Lifecycle — Middleware Chain

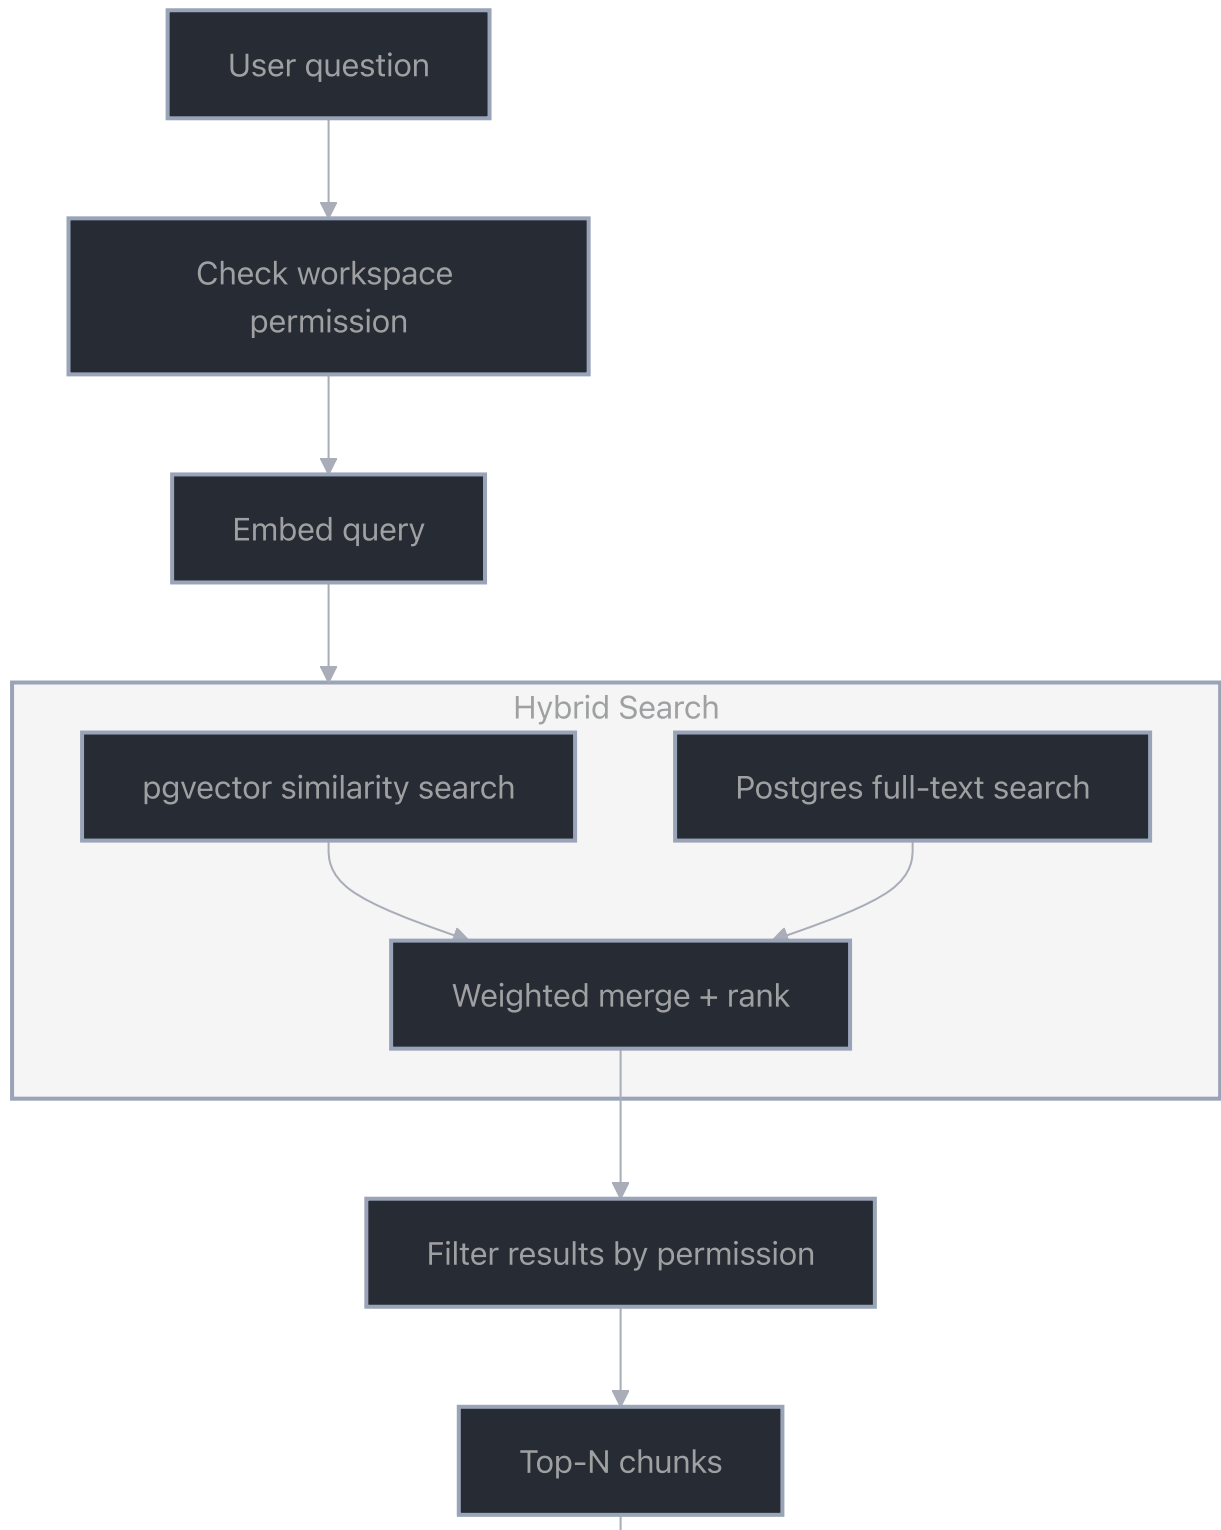

5. Document Ingestion Pipeline

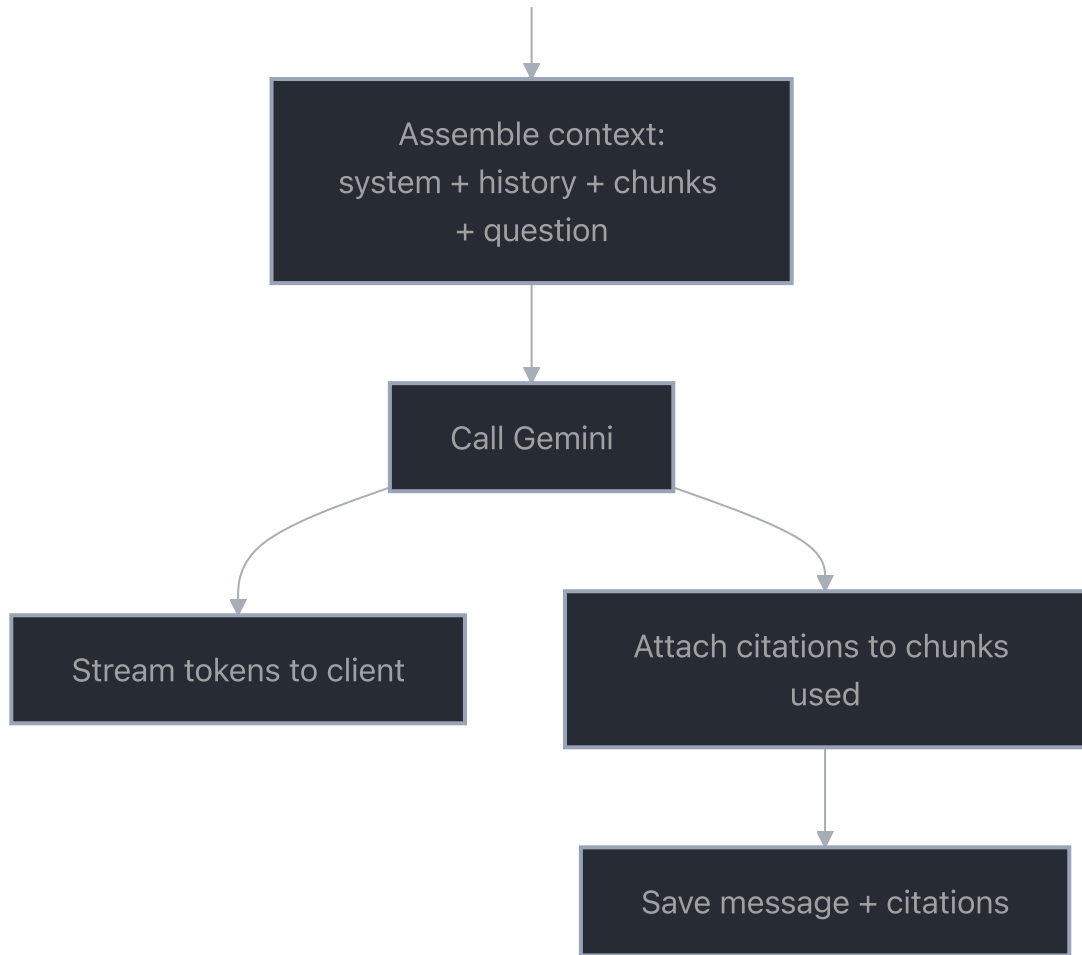

6. RAG Retrieval & Chat Flow

How to keep these useful

- Store this file at `docs/architecture/diagrams.md` in the repo.
- Update a diagram **in the same PR** that changes the behavior it depicts — treat it like a test that can go stale.
- When you reach the Agents and Workflow slices, add new diagrams rather than overloading these.
- GitHub renders Mermaid natively in `.md` files, so this works as-is in your repo without any extra
